Portable CleanMe is an application that you can use to clean up temporary files from your computer, in order to free up space and ultimately improve the performance level of your system. Since installation is not required, you can place Portable CleanMe on a removable drive, plug it into any computer and directly run its executable file. What's more important is the fact that your Windows registry keys will remain intact. The interface of the program is based on a standard window in which you can select which part of your computer you want to clean (or just select the "clean all" option) and let Portable CleanMe take care of the rest. So, the tool can look into temporary files and Internet files, downloads, logs, cookies, recently opened files, Office temporary files, Recycle Bin and temporary app data. In addition, you can perform an analysis before cleaning items. The simplistic application takes up a low-to-moderate amount of system resources, has a good response time, quickly finishes a clean job and didn't freeze or crash during our tests. However, the features offered by Portable CleanMe are pretty limited. Also, an error popped up every time we tried scanning the system for temporary files. Plus, you cannot change program settings (e.g. automatically run at system startup). We recommend Portable CleanMe with reservations. ## Portable CleanMe Crack

You need just 20 minutes and a system equipped with a USB port to enjoy all the benefits of a portable version of CleanMe! Start Cleaning Your PC! In just a few minutes you'll notice that all the files or folders that are not often used, or are not required for your work, are being removed. Your PC's performance will be improved, and the amount of free space will increase. The Program does its work automatically in the background without any impact on the system. As soon as the process has finished, the application will close by itself. There's no need to restart your PC. You'll enjoy a high level of security because the application doesn't display any icons or windows when it's cleaning the system, nor does it require Administrator privileges. It will only take less than two hours to complete a full cleaning, depending on the number of files or folders you have in the system. We tried several portable cleaners and Portable CleanMe is the one that checks your computer for temporary files the fastest! You'll also be able to clean all the remaining temporary files from your computer, as the application checks for the size of the cached files, as well as the program data and Internet temporary files. Also, the app will be able to check for the existence of your backups. We liked the ability to do a system-wide scan, and the fact that we can check the app for Internet temporary files. Also, the app was able to detect all the Internet temporary files in a few minutes, which is important because the Internet may be a cause of temporary files on our PC. If Portable CleanMe has any flaws, it's that it doesn't let you choose which files or folders to remove. Instead, the app is limited to all the temporary files in your computer. In our opinion, the portable version of CleanMe is the ideal tool for those users who have a system that doesn't have a lot of temporary files. Also, if you need to clean all the temporary files from the computer. As well as from the Internet. This is a good and very clean program. You can specify to clean only the files and not to clear the Recycle bin and have the program do a quick scan and then close. I wanted to see what would happen so I had the program clean all of the files and have it remove the Recycle Bin and then clear it as well. The program did the scan and then closed and there was
