Barbarian Queen (1985) - Tamil Dubbed Movie Watch Online DVDRip.Cytosolic Ca2+ signals are responsible for cellular responses to a variety of extracellular stimuli. Both spatiotemporal and intensity properties of intracellular Ca2+ signals are critical for most physiological processes, including growth, differentiation, motility, secretion, and gene expression. The biochemical mechanisms of Ca2+ signals are complex and involve an interplay of numerous proteins, including ion channels, exchangers, pumps, and modulators. The long-term goals of this laboratory are to understand how these proteins work together to generate Ca2+ signals, how the resulting information is read, and how the regulation of these processes leads to changes in cellular behavior. This research program will specifically address the regulation of Ca2+ influx through voltage-gated Ca2+ channels (VGCCs) at the molecular and cellular levels. VGCCs are the most common pathway for Ca2+ influx in all cells. However, the diversity of Ca2+ signals arises from differences in both channel regulation and the sources from which Ca2+ is released. The focus of this proposal is on the first step in the pathway, the regulation of Ca2+ entry through the L-type VGCC (LTCC) channels. These channels are the most abundant Ca2+ influx pathway and are critical for a broad range of physiological processes, including muscle contraction, hormone secretion, fertilization, and neuronal function. For many years, there has been disagreement in the literature about the basic mechanisms that regulate LTCCs. This controversy is probably best exemplified by the lack of understanding of the molecular mechanisms that regulate channel inactivation. In the past few years, our laboratory has identified a group of proteins that are critical for inactivation and have identified a number of molecules that directly interact with these proteins. Using a combination of biochemical and electrophysiological approaches, we will examine the roles of a variety of inactivation 4bc0debe42
